

RSA® Access Manager

Web Access Management Solution

At a Glance

- Contextual authorization enforces access based on a risk and context
- Web SSO offers an enhanced user experience
- Centralizing security ensures trust and enforces business policy
- Integration with existing e-business infrastructures delivers ROI

Today's competitive global market is driving an insatiable appetite for business models that turn digital information into competitive advantage. The need for anytime, anywhere access to this digital information is shared by employees, customers, and partners. The RSA® Access Manager solution enables organizations to cost-effectively provide secure access to web applications within intranets, extranets, portals and exchange infrastructures.

With RSA Access Manager, a component of RSA's Identity Assurance solutions, companies can secure access to web applications and consolidate access controls for enhanced security, and benefit from an improved user experience and accelerated application deployment. RSA provides end-to-end security for web portals to ensure that every user has secure, convenient access to the information and resources they require.

The RSA Access Manager solution delivers contextual authorization enforcing access based on a specific risk and business context according to policy. Contextual authorization is an essential technology control to mitigate risks related to unauthorized access.

RSA Access Manager is intended to allow organizations to provide secure access to web applications within intranets, extranets, portals and exchange infrastructures – with transparent, single sign-on (SSO) access for a positive user experience. All while cost effectively managing users entitlements to sensitive data within a centralized security framework

Enabling SSO can improve communication and facilitate business with customers, strengthen partner relationships and bolster employee productivity. Equally important, organizations can reduce administrative burdens and lower costs. With RSA Access Manager software, enterprises will be able to receive the full benefits of identity management and seamless integration within their existing environment.

Enablement

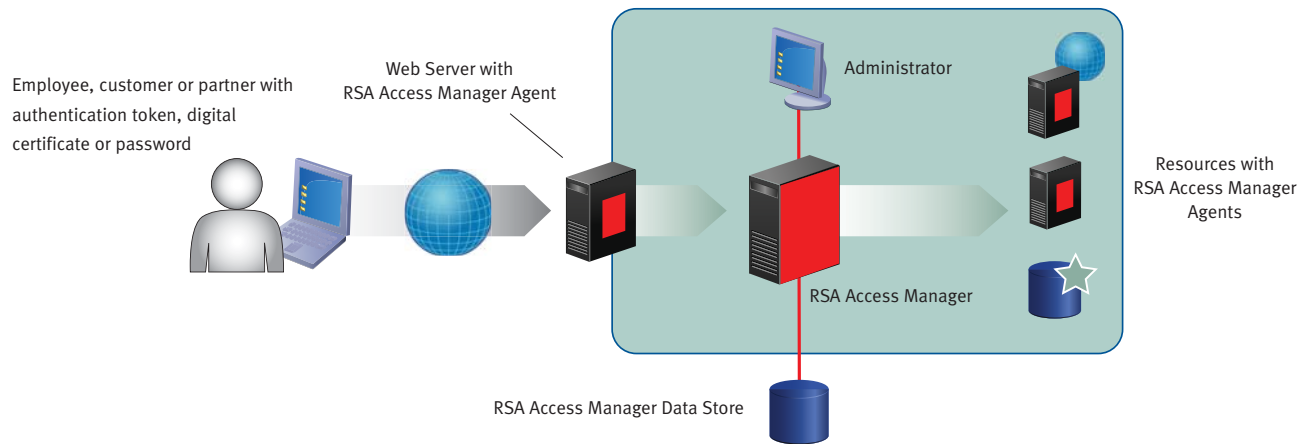

A true enabler of meeting today's anywhere, anytime data access requirements, the RSA Access Manager solution is designed to centrally manage user privileges for access to web resources based on definable user attributes, business rules and security policies that directly reflect the objectives of your business.

Integration with Existing e-Business Infrastructures

To provide a truly unified security management solution, RSA Access Manager software enables tight integration into existing, complex, multi-vendor environments – including web servers and application servers. It also provides native support for databases and directory servers, allowing you to leverage your existing user data.

Performance and Scalability

RSA Access Manager software offers total scalability and performance, which translates into the ability to grow with infrastructure requirements. The product has been proven – in live customer environments and independent testing – to meet the scalability and raw throughput requirements of user populations numbering into the millions. It is also designed to enable delegated administration and automated policy updates, alleviating the bottlenecks that plague growing infrastructures.

Flexibility and Extensibility

RSA Access Manager software integrates with existing data repositories, web servers and application servers, so you can deploy with “plug and play” speed. RSA Access Manager makes it relatively simple to map business rules to user access policies and easy deployment allows businesses to benefit from significantly reduced time to market critical projects, whether they are incorporating new sites, integrating partner sites or adding new applications. Equally important, RSA Access Manager technology offers one of the powerful suite of robust APIs engineered to allow easy extension of the solution to meet custom requirements. Features

Robust Authentication and Authorization Capabilities

Providing enhanced security is at the core of everything RSA does. All of RSA’s strong authentication solutions and more are supported by the Access Manager solution. Its authorization capabilities offer the flexibility for enterprises to enforce their business policies with basic entitlements (user, group) as well as dynamic and transactional Smart Rules® functionality.

Heterogeneous Application and Platform Support

The quickest way to achieve a return on investment from a web access management solution is to get it up and running on the systems and applications an enterprise already has deployed. RSA Access Manager software is available on a wide array of platforms to meet customer needs. The RSA Secured® partner program, one of the oldest programs in the security industry, ensures that RSA Access Manager Ready applications have passed rigorous testing and certification and are fully supported.
