

SharePoint Client Solutions

Colligo Contributor™ is an easy-to-deploy .NET client application that extends the power of Microsoft Office SharePoint® to the desktop. It increases productivity and adoption by enabling users to instantly and securely access, modify, and create SharePoint content online and offline through a rich client interface. The software includes two user interface options: a standalone desktop client and a Microsoft Office Outlook® Add-in.

Colligo Contributor Improves the SharePoint Desktop Experience

- Email & Document Drag-and-Drop
- Document & Form Libraries
- Automatic Metadata Capture
- Custom & Standard Lists
- Custom Metadata & Views
- Offline & Online Options

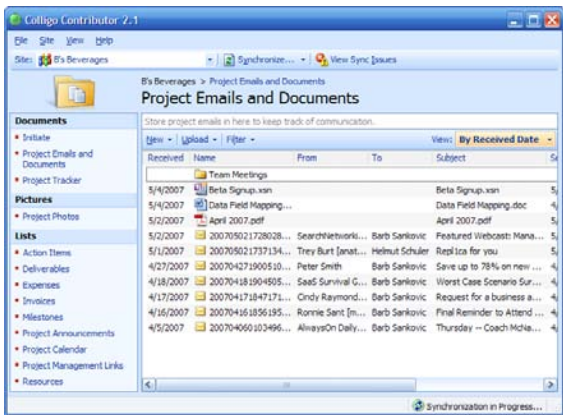

Desktop Client Interface

The standalone client enables users to sync SharePoint document libraries, lists, or entire sites to a local encrypted data store. It looks and acts like the default SharePoint 2007 web interface, but offers the improved user experience of a full desktop application. By caching lists and libraries locally, content and metadata can be accessed quickly offline and online regardless of connectivity speed. Contributor features secure two-way synchronization with conflict resolution functionality - changes made offline are cached and automatically updated on the SharePoint server in the background when online.

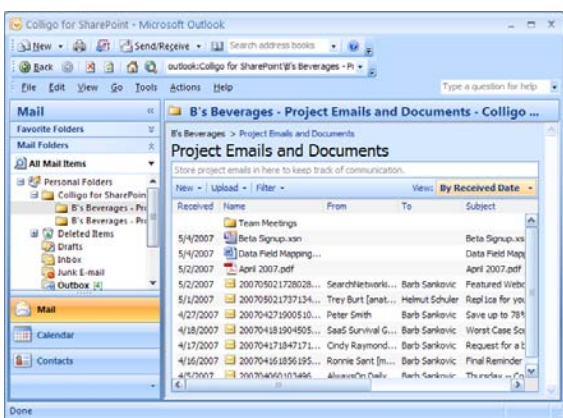

Microsoft Outlook Add-in

The Outlook Add-in provides a convenient way to link SharePoint document libraries with Outlook folders. Content can be cached locally for offline access or be made available online-only. Once synced, users can easily move emails, attachments, and documents between Outlook and SharePoint manually with a simple drag-and-drop or automatically using Outlook rules - a powerful capability for email retention or collaboration applications. With emails, Contributor captures standard message fields and maps them to metadata in the document library. Custom metadata can be updated immediately once content is moved or copied within the Outlook Add-in.

- **Deploys Fast** - 5MB client can be silently installed - no server modifications
- **Improves Access** - caching guarantees fast access both online and offline
- **Drives Adoption** - increases use of SharePoint for content management
- **Optimizes ROI** - maximizes the return on your SharePoint investment

Microsoft Outlook Add-in

“Excellent Ease of Use” - eWeek

Email Drag-and-Drop - Emails and attachments can be easily moved or copied to/from document libraries synchronized in Contributor. Email message fields including To, From, CC, Date, and Subject are automatically captured. Users can immediately apply custom metadata for further classification.

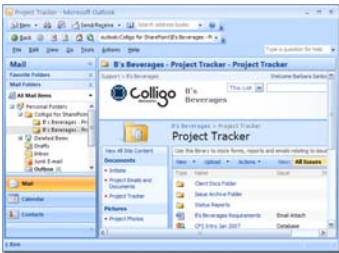

Online & Offline Configuration Options - Optional local caching improves user productivity over slow connections or when working offline. The Outlook Add-in allows users to choose whether a document library is available online-only or cached for offline use. With online-only mode, while users cannot access content offline, they can still add content (which is cached until the user returns online).

Custom Metadata & Views - Content is organized using the same standard or custom views defined on the server. Variables ([Me] and [Today]) enable desktop views to change depending on the user and date. Multi-value lookups are also supported. Metadata changes can be made online or offline, to one or multiple documents at a time.

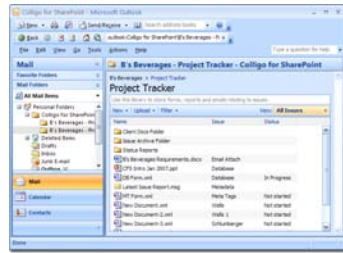

InfoPath Forms & Document Libraries - Documents and InfoPath forms are edited simply by double-clicking and saving back to Contributor. New documents can be created on the desktop using the same content types available on the SharePoint site. Documents can be added with a simple drag-and-drop.

Custom & Standard Lists - The standalone client provides access to custom lists and many standard lists including events, issues, links, contacts, announcements, tasks, and agendas. List items can be added and edited with just a few clicks.

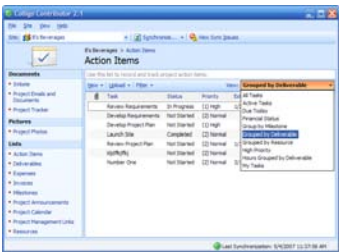

Synchronization & Version Resolution - Users can select specific documents, libraries, or entire SharePoint sites for synchronization. Content is kept up to date with automatic background sync based on startup, exit, and configured time intervals. If online, modifications to content immediately trigger synchronization. Elegant conflict resolution, integrated with Microsoft Word® compare and merge, notifies the user if conflicting edits have been made by multiple users.
